

Installing Standalone MineSight Package Licenses

1. Copy your license file into the %MEDEXE%\license directory.
Note that %MEDEXE% is the value of the environmental variable MEDEXE, if MEDEXE=H:\programs\MineSight, then %MEDEXE%=H:\programs\MineSight.

1. Insert your MineSight Dongle Key.
 - a. If the red light on the key is illuminated, please continue to step 3.
 - b. If the red light on the key is NOT illuminated, you will need to install the driver. The driver can be downloaded from the Common Downloads section on our website, www.minesight.com. (The installer is called "HASPUUserSetup.exe" and can be found in the Package Licensing folder). **Be sure to remove the key before you install the driver.**
 - c. After installing the driver, reboot and re-insert the key. The red light should now be illuminated.

2. Once the License file has been copied and the key is being read, you should be able to start MineSight. When opening MineSight 3D, **be sure to select the "License by Package" option:**
